

<Justin Nichols/> <Full- Stack Developer/>

HTML // CSS
JavaScript // Python

Technologies I've Used:

React / Redux / Thunk / Axios / Yup / Jest / Amazon Web Services
Formik / Emotion / Moment / Material UI / Oauth / Semantic UI
AG Grid / GraphQL / SASS / NPM / Yarn / Node.js / Express
SQLite3 / Knex / MongoDB / Postgres / Dotenv / Bcrypt.js
Helmet / SuperTest / JSONwebtoken / Django / Flask

My Projects:

Well-Done:

Our backer: <https://welldone.org/>

Tech -Stack: React, Redux, AG Grid, SASS, Semantic UI,
ReactStrap, Node Js, Express, Knex, SQL, Postgres.

Video Overview: <https://youtu.be/7EnnwSb3-D8>

Deployed project: <https://welldone.netlify.com/>

Repo:<https://github.com/Lambda-School-Labs/well-done-fe>

Overview: Built an IoT Web application, for Well-Done an international non-profit based in California.”

Contributions: I contributed to our team's objectives, by building several charts, organization info pages, an activity Calendar for each pump, and added foreign keys to our pre-existing database.

Location: Minneapolis, MN

Phone-Number : (952) 270-9736

“Marine, pursuing a Career in software development. I am driven by curiosity, and a passion for innovation and technology. I am looking to become part of a team, in which I can apply my unique background to make impactful and effective contributions.”

Food Truck Tracker:

My Position on the Team: Back-End Developer.

Tech-Stack: Node, express, knex, SQL, SuperTest.

Repo: <https://github.com/food-truck-tracker/back-end>

Deployed Project:

(API):<https://food-truck-tracker.herokuapp.com/>

Overview: As a team we were given four days to build an application that allows users to find their favorite food trucks.

Contributions: I built a fully functional, CRUD API and Database that utilized Node.js, Express, Knex, and SQL. I also incorporated Supertest and Jest to test endpoints. Deployed on Heroku.
